  length and ATP 25, 26
  morphology 29, 30
  role 28
  structural components 28, 29
Colcemid 40
  retinal pigment epithelium structure 40, 45
Cones
  glycine 73
  opsin, C-terminal sequence 197
  rhodopsin, monoclonal antibody binding 196
  signal transfer 275
Cone outer segment, rhodopsin 198–200
Coupling, cells and neurotransmitters 83
Crossreactivity, rhodopsin monoclonal antibodies 195–8
Cytokeratins, retinal pigment epithelium 35
  distribution 36, 40
Cytoskeleton, retinal pigment epithelium cells 23–46

Desmoplakins, localization, retinal pigment epithelium 38, 42
Desmosomes, retinal pigment epithelium 36–8
  cell culture 38, 39
  distribution of proteins 38, 41
  electron microscopy 36, 37

localization 38, 41
plaque proteins 39, 43
Dopamine
melatonin interaction 130
retinal function 143–5
neurotransmitter 132
release
inhibition, affinities 144
luzindole effects 137
melatonin analogs 140, 141
melatonin potency 138
melatonin receptors 136–42
serotonin effects 137
synthesis 132
turnover regulation 133
Dopaminergic system, retinal 132–6
activation 136
activity modulation 134–6
amacrine cells and light 133
melatonin effects *in vivo* 138–40
melatonin modulation 144
photoperiodic information 144

Edman degradation 122
Electron microscopy
embedding 181
immunocytochemistry labeling 181
retinal neurons 12, 13
Electroretinogram
Müller cell light responses 157
slow PIII response, Müller cell 167
b-wave generation, Müller cells 166, 167
Enzyme-linked immunosorbent assays (ELISA) 177, 178
Evolution, glycinergic networks 101–4
Experimental autoimmune uveitis (EAU)
cell-mediated immunity 58
cyclosporin A effect 58, 59
mechanisms 58
molecular mimicry 60, 61
S-antigen 58–60
synthetic peptides 59, 60, 61

Fast transmitters 67, 68
Fatty acid nomenclature 211
Field potential, Müller cells 159, 160

GABA
bubble formula 67, 68
Müller cells 162
GABAergic neurons
dendritic arbors 100
developing retina 13, 17
HPC-1 antibody 13
monoclonal antibody study 13–15
Ganglion cells
AB5 antibody 7
AB5 immunoreactive cells 6–9
dendritic processes 6, 9
density, pigmented and albino 11, 12
dissociated preparation 6, 8
glycine 73
glycine response 92–7
inhibition 95
and strychnine 93
inhibition and dark adaptation 275
inner plexiform layer 7
monoclonal antibodies 6–10
OFF–center driving 96
and light 97
OFF–center Y and strychnine 96
ON–center Y and strychnine 96
rhodamine excitation 6, 8
somatostatin 110, 117
threshold device 259
Thy-1 antigen 6
α-type labeling 8, 9
β-type labeling 9
Gene cloning
opsin 198
rhodopsin, steps 199
Glial cells *see also* astrocytes, Müller cells, oligodendrocytes
electrophysiology 153–68
Glutamic acid, bubble formula 67, 68
Glutamine
Müller cells 162
ON-bipolar cells 257, 258
Glycine *see also* receptors
cell level and neurotransmitter role 75
formula 67, 68
GABAergic synapses 67, 68
ganglion cell response properties 92–7
OFF-center X 93, 94
ON-center X 94, 95
high affinity uptake system 69, 70

-labeled retinal systems 71–84 *see also* individual cell types
low-affinity, high capacity system 70
Off-center ganglion cell control 68
retinal role 67–104
retinal supply 71
rod-rich areas 80
roles 99–104
Glycinergic network, evolution 101–4
Glycinergic neurons

immunocytochemistry 71
immungold labeling 87
percentage 78
physiology, A11 amacrine cells 89, 90
and vision 92
Glycinergic signal flow 99
narrow field 100
OFF-center pathway 100
photopic role 100
scotopic path 99
Glycinergic systems
amacrine cells 84–93
circuitry 84–97
GMP, cyclic, *Limulus* internal transmitter 248
Golgi method 1
impregnation 77
G-protein subunits 244
GTP-binding protein, *Limulus* sp. 244
Guanine-nucleotide binding protein, transduction 219

Heavy meromyosin (HMM) 30, 34
High performance liquid chromatography (HPLC)
CNBr-cleaved rhodopsin 186
Histological methods 1, 2
Horizontal cells
cone convergence and rod gain 267–70
cone driven synaptic channels 268
dark adaptation 275
hyperpolarization 275
light stimulation of cones 269
monoclonal antibodies 4
receptive field 257
rod convergence 270, 271
rod-driven response 268, 269
rod, light reponses 256, 257
toad 263, 264
rod steady-state relation 263
rod transmission 269
voltage transfer from rods 261–5
Hybridoma 2, 3
advantages 17
Hydroxyindole-*O*-methyltransferase activity 131

Immunoassay methods
monoclonal antibodies 177–9
Immunoblot analysis 79
Immunocytochemistry
electron microscopy 181
glycinergic neurons 71
monoclonal antibody labeling 179–81
Immunoglobulin G (IgG), AB5 monoclonal antibody 7
Inner plexiform layer (IPL)
catecholamine neurons 134
glycine-labeled profiles 87, 88
glycinergic lamination 79
light-induced potassium changes 167
nomenclature 72
somatostatin levels 110, 112, 115, 117
amacrine cell input 113, 117
sublamina *b* 113, 117
synaptic junctions and somatostatin 113, 114, 118
Inositol phosphates
calcium channels 214, 215
light-induced rise 218
membrane electrical responses 221, 222
physiologic effects 220–2
Inositol polyphosphates
light and isomers 218
Limulus effects 244, 245
Inositol 1,4,5-triphosphate
calcium ions 220

inositol phosphate and mimickry 221, 222
intracellular pressure injection 221
light-dependent increase 224
rod photoreceptor effects 221, 222
second messenger 213, 244
Intermediate filaments, retinal pigment epithelium
cytokeratin 36, 39, 41, 43
epithelium development 40, 44
intracellular distribution 36, 40
55Kd protein 35, 38
protein identification 35, 36
SDS electrophoresis 36, 39
vimentin 36
Triton cytoskeletons 36
vimentin 36, 39, 41, 43
Iodomelatonin
calcium-dependent dopamine release 141
retinal binding 142, 143
Iontophoresis 92

Light and dopamine turnover 143
Limulus polyphemus see also microvillar visual cell

lipid role 54
molecular weight 53
monoclonal antibodies 59
oligosaccharides 54
peptide fragments 53, 54
photoreceptor cell function 56, 57
phototransduction 56
pineal gland function 57, 58
mRNA 55
secondary structure 62
spectral data 53
transducin similarity 56
sequence homologies 57
uveitopathogenic 52
sites 59, 60
Second messenger 211
Serine hydroxymethyltransferase 71
Serotonin, neurotransmitter role 135, 136
Signal transmission, rods 255–77
postsynaptic light responses 256, 257
Somatostatin
neurons identified 111
retinal 109–27
isolation 111
structure of retinal 124–6
amino acid composition 121, 125
amino acid sequences 121, 125
bovine 124
frog brain 125, 126
purification and recovery 120, 121, 125
Somatostatin-like immunoreactivity
amacrine cell contacts 116, 118
biosynthesis 121–4
biosynthetic and synthetic, elution 119, 123
concentration and species 116
contents 118, 119
goldfish retina 110
label release 117, 118, 123
label uptake 117, 121, 122
localization 115–18
electron microscopy 112, 113, 117, 118
inner plexiform layer 112–14, 118

light microscopy technique 115
molecular forms 116, 119
macromolecule 116, 119
post-translational processing 118, 123
purification, frog 120, 124, 125, 126
sublaminae *a* and *b* 111
turnover 123
Somatotropin-release inhibiting factor (SRIF)
and somatostatin isolation 111
Spectrin-like membrane-associated protein 201
localization ROS 203, 205
monoclonal antibody 201, 202
Stain
actin 37
coomassie blue 183
immunogold-dextran 181
Strychnine
and ganglion cell response to glycine 93
glycinergic function 95
maintained discharge 93
Symporters 69
HA 69, 70
Synapse
glycinergic 98
sign conserving 262–5
Synaptic gain, rods 260–72
cone convergence 267–70
input–output relation 263
limiting factors 261, 262
ON-bipolar cells 265–7
salamander 272
sign-conserving 262–5
transmitter-induced 260, 261
Synaptic organization, dark adaptation 275, 276

Taurine, Müller cells 162
Teleost, specialized retina 102
Thyrotropin-releasing hormone, retina 111
Transducin 56, 57
monoclonal antibodies 201
subunits 199, 201
Transmitter-induced conductance increase 260, 261
Tubulin, retinal pigment epithelium 42, 43

Vimentin, retinal pigment epithelium 35
cell culture 38, 39, 41, 44
distribution 36, 40
properties and development 30, 39, 40, 44
Vinculin 28, 29

Western blotting AB5 antigen 7, 10
Whole-cell patch procedure 221, 222

Zonula adherens 24
plaque components 28, 29
